

MOBILE IMPACT PLATFORM

Supercharge your Mobile Data Collection with the Mobile Impact Platform

Mi-Corporation's Mobile Impact Platform (Mi-Platform) is an intuitive, user-friendly mobile data capture platform that supports 100% of your mobile form needs, including routing and approval steps, integration, user management, offline syncing and data replication, and data security. A pioneer in the industry, we offer flexible, scalable, and robust data capture technology for faster and more accurate inspections than ever before.

Mi-Platform offers something for everyone in your organization.

App Designers

Build custom forms quickly

IT Staff

Protect data and manage users

Stakeholders

Ensure speedy ROI

Inspection Team

User-friendly, intuitive apps

Management Team

Quick access to field data for billing and reporting

Powerful App Design Tool

Your form application designer will be thrilled to use our state of the art, web based design tool.

- + Import forms via standard form conversion tool
- + WYSIWYG designer builds form applications optimized for all devices from scratch or allows you to easily edit existing templates. Simply drag and drop widgets for capturing barcode scans, images, GPS coordinates, signature fields and more.
- + Point-and-click authoring of validation rules
- + Datapaths allow for ease of integration with backend systems using APIs, web services, ODBC connectors
- + Built-in form preview allows you to see what it will look like on actual devices
- + Design your application for multiple data exports including
 - XML
 - CSV
 - ODBC
 - Microsoft SQL Server
 - Microsoft Access
 - Microsoft Dynamics
 - PDF, PNG, TIFF, JPG, BMP
 - CDISC XML
 - Microsoft Outlook
 - Mi-Session Files (XML)
- + Spell checking
- + Utilize operating system provided voice recognition services

Mi-Enterprise Middleware Solutions for Your Enterprise Class Needs

Your IT Team will enthusiastically support your use of Mi-Platform as it handles their security, flexibility, scalability and integrations needs.

CENTRALIZED MANAGEMENT WITH MI-ENTERPRISE MIDDLEWARE SERVER

- + Mobile formatted mobile web forms in browsers
 - + Integrate mobile web forms into your own application
 - + Centralized authentication of users with standard security features
 - Password strength
 - Password expiration
 - Account lockout
 - + Active Directory integration
 - + Centralized server-side data export including custom exports from script
 - + Queue-based workflow for users and groups
 - Logic based on form content
 - Form locking
 - + Open web-services based communication for app integration
 - + Administrative re-export of data
 - + Universally accessible web-based interface
- + Built on industry standard technologies
 - + Auditability and traceability with Session (form XML) archival and auditing
 - History of every session
 - Renderings of all pages in a form
 - Customer activity reporting
 - Session security hashing
 - + Session searching
 - + Use the server to run .NET code from apps

DATA SECURITY

- + Encrypted form templates
- + Encrypted form sessions
- + HTTPS (TLS) communication
- + Audit trails (date, time, user) for all captured data
- + Session history
- + Server audit trails
- + Session security hashing
- + Automatic background saving

Scalability - Scale from 10 to 10,000 users with the manageability you demand

Middleware can be hosted on Mi-Corporation's Azure instance or at the customer's preferred site

Offline Capabilities include data replication and device data repositories allowing for seamless data collection whether one has connectivity or not

Form Application Usability

Our data capture workflow technology enables apps that are intuitive and user friendly, allowing for the speed and simplification of inspections. Your inspectors will fall in love with how easy it is to adopt, mobilize and optimize data collection business processes that were formerly paper forms driven.

- + Mobile formatted forms on iOS/Android/Windows tablets, phones & web browsers
- + Data fields can be prefilled with known information from backend databases
- + Skip logic and form validations featuring highlighting and hiding for guided form input
- + Capture discrete data via checkboxes, picklists, and multiple types of text fields, handwriting, or simply use your voice to populate a form
- + Capture freeform ink for notes, signatures, and diagrams
- + Audio annotations allow user to include audio recordings with other data
- + Support for barcodes
- + Support for GPS & geo-location
- + Multiple pictures in a single image annotation field
- + Calculations automatically performed
- + Real-time display of validation rule status, with field navigation to assist the user in correcting validation rule violations
- + Print forms at point-of-capture, automatically email fully assembled reports, and send captured data to backend databases eliminating the need for report compilation and redundant, manual entering of data
- + Initiate workflow at the touch of a button
- + Ability to fully and completely work online or offline
- + Automatic background saving
- + Encrypted templates, sessions and HTTPS (TLS) communication

Mi-Analytics

Management teams will rejoice as they are able to quickly ascertain what is happening out in the field and what actions they must take to ensure productivity and profitability.

- + Automatic creation of backend data repository from inbound data
- + Open database schema for easy integration with other systems along with Mi-Platform integration
- + Open XML format for integration with other frontend capture solutions
- + Easy to configure charting engine that allows customization of displayed data
- + Customizable dashboards allowing administrators to set up custom views of data
- + Integration with SQL Server Reporting Services
- + Sample charts and reports provided
- + Automatic visualization of data as soon as it's submitted to the system
